MAJOR PROJECTS

Eden – Real-Time JSON Pipeline Engine ↗ **Go | YAML | Prometheus | Nix**

Data Pipeline Engine

- Built a YAML-configured Go engine for validated real-time JSON pipelines with transformations, branching, bounded workers, Prometheus metrics, native modules, benchmarks, and Nix-backed CI.

Pulse – Offline Workout Planner ↗ **Svelte | TypeScript | Capacitor | Android**

Local-First Mobile and Web App

- Built and released an offline-first workout planner with 72 exercises, muscle maps, per-set tracking, JSON backups, installable Android and web builds, and no accounts or analytics.

Elene – Local Android Utility ↗ **Go | ADB | Nix**

Android Developer Tooling

- Built an ADB CLI prototype for safe device detection and inspection, backed by Nix checks for formatting, static analysis, race-enabled tests, vulnerability audits, and CI.
